

QuesCom releases SaaS One Number application with mobile SIM management

Cloud based solution offers ultimate simplicity and utility for business users

Sophia Antipolis, France, 21 January 2011 – QuesCom SA, a leader in mobile gateway/FMC solutions, announces the release of its popular One Number application in a service provider version. One Number allows an enterprise user to provide one phone number to callers and the user chooses which devices and when they wish to be reached with multi-ring capability. As a service provider offering, no longer does the enterprise have to maintain hardware and software, One Number can be hosted in the IP cloud with a simple web interface provided to the user.

QuesCom Enterprise Mobile Communication Gateways further enhance the offering enabling the cost benefit of mobile to mobile call routing. With virtual SIM capability and QuesCom SIM management it is a plug-and-play solution for the end user with all configuration and maintenance managed by the service provider.

“Cloud based computing and IP telephony have created an opportunity for QuesCom and its partners to further simplify the lives of our end customers,” said Gilles Meyer, CEO, QuesCom SA. “We are excited about the future of our products and their integration with leading technologies.”

Software as a Service has grown in popularity and a natural evolution for telephony applications such as QuesCom’s One Number. For the service provider it brings new revenue opportunities and builds customer loyalty. For the enterprise it enhances mobile workforce efficiency while eliminating technical challenges. In addition, an optional Business Continuity feature may be enabled to route critical calls through the mobile network in the case of fixed line or data failure. QuesCom continues, and is committed, to build value for its customers and partners.

About QuesCom

QuesCom designs and delivers innovative fixed-mobile convergence solutions for both enterprise and service providers. Compatible with Voice over IP solutions, QuesCom fully integrates with any existing telephone infrastructure. QuesCom’s gateways provide a direct connection to mobile networks allowing users to realize significant savings on their communication costs and benefit from fixed/mobile converged solutions.
